

REMS PRESS TONGS

Join the PRESS GANG.

In recent years the introduction of construction systems and tools from the continent has gathered pace with the use of pressfittings and pressfitting tongs being a perfect example of products that are commonplace in Germany and France now making an impact here in the U.K.

Primarily used on larger construction projects the use of pressing tongs and fittings has many advantages over conventional jointing methods:

- No need to apply for hot work permits.
- Elimination of costly Insurance complications.
- Removal of possibility of flame damage.
- Significant reduction in on site fitting and commissioning.
- Minimal tube preparation.
- Ideally suited to prefabrication.
- Uncontaminated, heat free installation.

Brandon's research has led to the successful introduction into its hire fleet of the Rems Akku-Press universal pressfitting tool, a tool that currently has approval of more than 90% of the manufacturers of pressfitting man-ufacturers and suppliers on the continent, and now from IM1Yorkshire with their own range of "Yorkshire PressFit fittings".

The 12v cordless Rems Akku-Press weighs 4.5kg and completes with a rapid charger and a spare battery for continuous work and is suitable for pipe work from 10mm to 54mm (108mm) diameter.

Being cordless the Rems Akku-Press works anywhere, freehand, overhead and in confined spaces with its swivelling head.

Secure seating of the pressing tongs is achieved by automatic locking with secure, single-handed joint crimping achieved in seconds and an acoustic signal confirming completion of the pressing process and a perfectly pressed joint.
