

ROLL GROOVERS

Get in THE GROOVE.

Brandon Tool Hire has increased the number of Rems Roll Grooving attachments available throughout its network.

This increasingly popular tool attaches to most conventional threading machines and creates a groove, or indent on pipe-work to receive an 'O' ring of a coupler when joining two sections of pipe together.

The Roll Groover is ideal for:

- Installation work.
- Fabrication of fire sprinkler system lines.
- Horticultural irrigation.
- Commercial heating systems.
- Industry.
- Mining.
- Workshop prefabrication.
- Steel, stainless steel, copper, aluminium and P.V.C.

The Roll Groover uses an oil hydraulic pressure cylinder for powerful forward feed of the pressure roller and an adjustable groove-depth stop with fine adjustment and automatic pre-setting.

Steel pipes up to 300mm diameter can be precisely grooved by means of the perfectly size-adjusting pressure rollers and counter-pressure rollers with well gripping axial knurls guaranteeing a secure rotation of the pipe.

If you would like a demonstration call 0870 5143391 for more details.
